EDUCATION

Western Governors University
Bachelor of Science in Computer Science

May 2027
Los Angeles, CA

EXPERIENCE

Ayzenberg

AI Engineer Intern

Jul. 2025 – Apr. 2026
Pasadena, CA

- Lead Developer for a multi-agent system in TypeScript cross-functionally serving **160** employees.
- Engineered RAG pipelines utilizing semantic and keyword-based chunking schemas to index data into Azure Search.
- Developed serverless Azure Functions in Python to extract and process user calendar and project task datasets.
- Built agent tools integrating 3rd party REST APIs to automate cross-functional workflows across **5** departments.

Microsoft

Software Engineer Intern

Jun. 2024 – Sep. 2024
Redmond, WA

- Enhanced Copilot search accuracy by **7%** by leveraging production LLMs for keyword extraction and embedding models.
- Integrated transcript metadata into Knowledge Graphs, increasing query retrieval efficiency by **17%**.
- Optimized distributed backend pipelines using serverless C# Azure Functions to process raw data streams asynchronously.
- Engineered a custom backend client in C# to ingest unstructured telemetry via the Microsoft Graph API.

Microsoft

Software Engineer Intern

May 2023 – Jul. 2023
Redmond, WA

- Built a real-time collaboration app using ReactJS for classrooms with over **30** students, increased engagement by **63%**.
- Engineered real-time messaging, polling, and live feedback features by implementing persistent bidirectional WebSockets.
- Developed scalable Express.js REST APIs to handle state synchronization, data validation, and student session payloads.
- Designed backend GraphQL schemas, queries, and mutations, authoring custom resolvers to aggregate student data.

Oregon Human Development Corporation

Software Engineer Intern

Aug. 2022 – Apr. 2023
Los Angeles, CA

- Engineered an Android app in Kotlin serving **68,000** agricultural workers to deliver safety training modules.
- Optimized client-side latency by orchestrating concurrent data streams via Firebase to load learning modules in parallel.
- Implemented localized UI layouts in XML and SharedPreferences caching to track offline progress in 3+ languages.

PROJECTS

[AERIS](#) | *Next.js, YOLOv8, Groq, LLaMA, Supabase, FastAPI, Twilio, DAIN AI*

Apr. 2025

- Won **1st Place Groq** at LA Hacks 2025
- Built an agentic drone system that autonomously locates disaster victims and dispatches responders to their locations
- Developed Python computer vision pipeline with **78% accuracy** using YOLOv8 for hazard and victim detection
- Automated emergency response using AI agents to find hospitals and coordinate Twilio-driven 911 calls

[SwarmAid](#) | *Python, OpenAI Swarm, Leaflet.js, Next.js, OpenAI*

May 2025

- Won **2nd Place Overall** at Hack Dearborn 2025
- Built an agent orchestration system to distribute food from suppliers to shelters in **4-7 seconds**
- Designed Swarm agents for detection, matching, routing, and compliance via API-driven coordination

[Synergy](#) | *Next.js, Flask, Supabase, LangChain, Vercel, OpenAI*

Sept. 2024

- Won **3rd Place Overall** at NJIT Hacks 2024
- Built a team-matching web platform to help **4,000 hackers** find teammates at major US hackathons
- Developed RAG-powered recommendation system to match over **100** students per hackathon based on skills and experience

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, Typescript, Java, C/C++, C#, SQL, Kotlin, HTML/CSS

Infrastructure: AWS, Azure, Docker, Kafka, Aure Functions, Azure AI Foundry, Firebase, GCP, Supabase

Backend: Node.js, ExpressJS, PostgreSQL, GraphQL, REST APIs, Firebase, Supabase, ChromaDB, Flask, FastAPI

AI/Data: OpenAI, Anthropic, Gemini, NumPy, Pandas, Scikit Learn, Matplotlib, OpenCV, PyTorch, TensorFlow, Keras, LangGraph, LangChain, Ollama
